

BIH-EPETY MBACHAM SHARON NGWAFOR

Cambridge, United Kingdom | +44 7455063633 | smbacham@yahoo.fr

PROFESSIONAL SUMMARY

Business Analyst with a strong background in requirements analysis, process improvement, data analytics, stakeholder engagement, and quality assurance across technology, healthcare, and research environments. Skilled in BRD and PRD development, UAT, process mapping, KPI reporting, and data-driven decision-making, with proficiency in Jira, Azure DevOps, Confluence, Power BI, Excel, SQL, Visio, and Lucidchart. Experienced in analyzing complex information, translating business and user needs into actionable requirements, identifying process inefficiencies, and communicating insights to multidisciplinary stakeholders. Brings highly transferable skills in critical thinking, problem-solving, documentation, risk identification, workflow optimization, and cross-functional collaboration to support effective project delivery and continuous improvement

CORE SKILLS

Requirements Gathering | Stakeholder Management | Data Analysis | Process Improvement | Business Process Mapping | Gap Analysis | Workflow Optimization | User Stories | Business Requirements Document | Data Visualization | Change Management | Customer Journey Mapping | Business Strategy | Agile Transformation | Continuous Improvement

TECHNICAL SKILLS

BRD, PRD, Functional Requirements, User Stories, Acceptance Criteria, UAT, RACI Matrix, Microsoft Visio, Lucidchart, Excel, Power Bi, SQL, JIRA

PROFESSIONAL EXPERIENCE

Business Analyst | Amdari Inc

United Kingdom | January 2026 to Present

- Improved requirement traceability and reduced project rework by 30% by gathering, analyzing, and documenting business and functional requirements in BRD and PRD using Confluence.
- Streamlined issue resolution and reduced sprint delays by 20% through effective project tracking and backlog management in JIRA and Azure DevOps.
- Leveraged Excel, SQL, and Power BI to analyze operational datasets, generate performance dashboards, and provide insights that supported data-driven decision-making for 5+ project stakeholders.
- Built interactive Power BI dashboards to monitor project KPIs, sprint velocity, and operational metrics, improving leadership visibility into project performance and reducing reporting preparation time by 35%.
- Enhanced team accountability and collaboration across 5+ cross-functional teams by developing RACI Matrices in Excel and Confluence, clearly defining stakeholder roles and responsibilities, and fostering efficient communication.
- Boosted operational efficiency by 25% by designing and optimizing business process flows in Microsoft Visio and Lucidchart, identifying inefficiencies, and implementing process improvements.
- Reduced post-launch defects by 35% and improved system reliability by leading User Acceptance Testing (UAT) in JIRA, creating detailed test cases, and tracking defects throughout deployment.
- Facilitated stakeholder alignment by presenting project progress, requirements updates, and process workflows using Power BI and Confluence dashboards, improving transparency and decision-making.
- Monitored key KPIs and project milestones using JIRA dashboards and Excel, enabling proactive identification of risks and on-time delivery of project objectives.

Research Associate | LAPHER-Biotech

2013 to 2026

- Supported ongoing research by applying clinical research methods and protocol-driven data collection to produce reproducible laboratory findings
- Performed laboratory data review and interpretation to inform experimental adjustments and downstream analyses

- Contributed to protocol development and analytical performance assessments to improve data quality and reproducibility

Medical Doctor, General Practitioner and Clinical Pathologist | Hospital of Research and Application in Endoscopic Surgery and Human Reproduction, CHRACERH

Yaoundé, Cameroon | May 2016 to 2023

- Analyzed laboratory results and clinical data to support diagnostic decisions and communicate actionable findings to multidisciplinary clinical teams
- Led assessments of clinical workflows and mapped patient flow processes to identify bottlenecks and propose data-driven improvements
- Applied quality assurance practices and clinical data governance principles to laboratory operations and reporting
- Translated patient and clinical needs into requirements for investigations and follow-up actions, informing laboratory testing strategies and data collection

Medical Doctor, General Practitioner | Centre Hospitalier d'Essos, CHE

Yaoundé, Cameroon | February 2014 to April 2016

- Acted as first contact in the Emergency Unit, collecting and synthesising clinical information to guide urgent care decisions
- Collaborated with internal medicine teams to consolidate patient data and ensure continuity of care across departments

EDUCATION

Specialisation in Clinical Pathology | University of Yaoundé I, Faculty of Medicine and Biomedical Sciences, Cameroon

December 2022

MSc Molecular Bioscience | University of Yaoundé I, Faculty of Medicine and Biomedical Sciences, Cameroon

April 2019 | Presidential and Faculty Award of Excellence for Best MSc Thesis in Molecular Bioscience

Doctor of Medicine | Université des Montagnes, Institut Supérieur des Sciences de la Santé, Cameroon

November 2013 | GPA 3.85 (awarded for first semester Year 6 excellence) | Senior Prefect's Prize for Leadership and Service

CERTIFICATIONS

- 2026 Health Tech Business Analysis, 10Alytics
- Postgraduate Certificate in Foundations of Clinical Research, Harvard Medical School, 2021 to 2022
- IVF Embryology and Andrology Certificate, Fertilis Academy, 2024
- International Summer School in Global Health, ISGlobal Barcelona Institute for Global Health, 2024
- Molecular Microbiology Internship, Tergooi Hospital, The Netherlands, 2019
- Capacity Building on Malaria e-Training, Swiss Tropical and Public Health Institute, 2014

PROJECTS

10Alytics Health Tech Business Analysis Capstone

Delivered a capstone presentation focused on project initiation and planning, including stakeholder analysis, business case framing and process mapping to inform digital health delivery readiness.

Technologies: Process mapping techniques, SDLC frameworks, Stakeholder analysis methods

MSc Thesis in Molecular Bioscience

Led a research thesis involving experimental design, laboratory data collection and statistical analysis, recognised with the Presidential and Faculty Award of Excellence for Best MSc Thesis.

Technologies: Laboratory data collection and analysis, Biostatistics, Research protocol implementation
